

Novel imaging research worthy of a Nobel Prize [Title Ariel 12 bold]

Erik Ingebrigtsen*, Second McAuthor(2), Third A. Contributor(3) [Times New Roman 12, presenters name underscored, full names, single line spacing]

*Department of health, Faculty of Medicine, NTNU, (2) Department of illness, University of Hamar, (3) The Queens Surgical Ward, Hospital of West Norfolk, UK. [Author affiliation Ariel 12. Correct and up-to-date affiliation information for your co-authors is a requirement for proper scientific conduct]

After an open line, submit the abstract text, Times New Roman 12, single line spacing, no other particular or inspired formatting. Suggested length is 300 words – do not exceed one page. In general, we would encourage you to organize your abstracts in accordance with the IMRaD format [Introduction, Method, Results and Discussion], with a few sentences for each of these elements. However, for some of you this will not be a feasible solution, as you may only recently have embarked on your PhD studies, and therefore have little data to present in the Results and Discussion parts. In that case, you may instead present your main hypothesis and possible implications of your project.

If you need to add illustrations, tables etc in your abstract, please make sure that you do not exceed the limits of one page. Do not add page number, header or footer.

Abstracts not conforming to these requirements will be returned for editing. Please note that participants will be accepted on a first come, first served basis according to completed registration AND our reception of an abstract conforming to the requirements.

Please save the file as 'your_name.pdf' and send it to erik.ingebrigtsen@ntnu.no
