

# Concept Symposium 2016

## Governing the Front-End of Major Projects

### Learning across hospital projects by a shared evaluation agency

Kari Gro Johanson

Project Director

Helse Stavanger HF/Sykehusbygg HF  
Norway

Until the Ministry of Health and Care Services (HOD) established the Norwegian Hospital Construction Agency (Sykehusbygg HF) late 2014, most new-builds/hospital projects in Norway were executed by the project owner's organization (i.e. the Hospital). Planning and constructing of a new regional/local hospital is considered a "once in a lifetime" project for the hospital in charge, and the required hospital project expertise is normally not available with the project owner's organization. (Although exceptions exist).

Before 2015, most hospitals executed their projects by contracting expertise from the consultancy market. Several private agencies with in-depth knowledge and width-expertise on hospital projects have over the years acted as the main experience transfer arena. By establishing Sykehusbygg HF, the ambition of HOD is to evaluate hospital projects across Norway for better projects and increased standardization. Each single hospital project will benefit from learnings and experiences from new-build hospitals, in Norway and abroad.

Pitfalls: Sykehusbygg HF should avoid being too bureaucratic, too rigid and too conservative, preventing innovation to take place. Also, Sykehusbygg HF needs to maintain the collaboration with the consultancy market both for resources and for knowledge sharing. The main focus for Sykehusbygg HF should be towards project development in the early phase rather than the execution phase.

Keywords: evaluation across hospital projects, experience transfer, collaboration with the consultancy market

# Helse Stavanger HF SUS2023

.....

Learning across hospital projects  
through a shared evaluation agency

# Agenda:

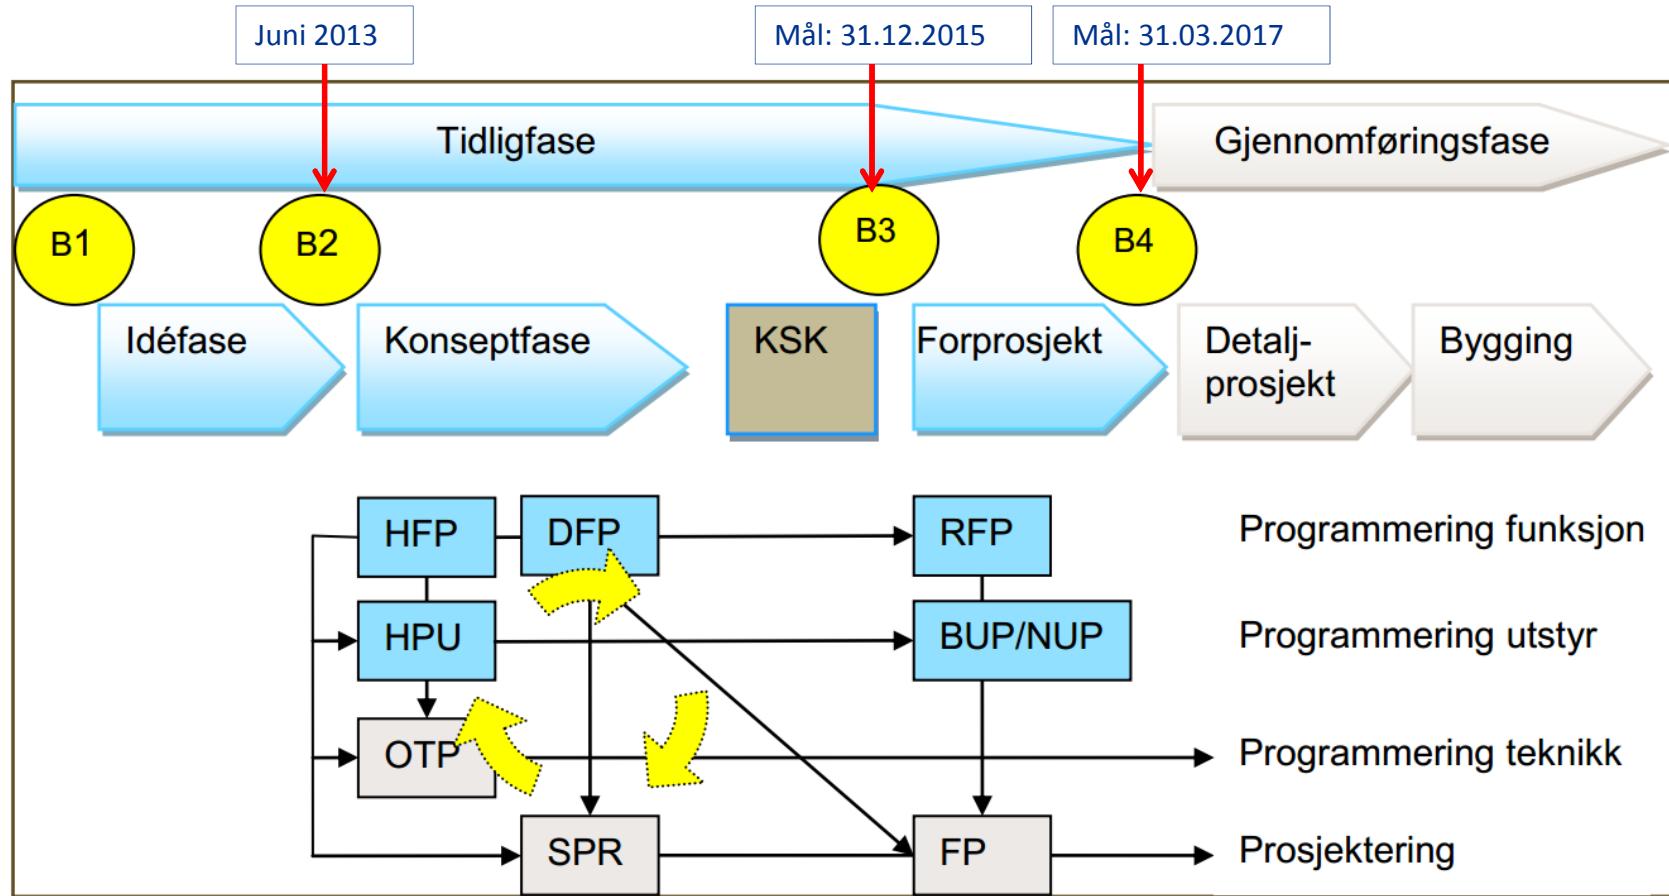

1. Background Stavanger University Hospital (SUS) and SUS2023 project
2. Experience transfer «as is»
3. Learning across hospital projects by a shared evaluation agency (Sykehusbygg HF)
4. Pitfalls

# 1. Background SUS2023

## Kvalitetssikringsrapport

Kvalitetssikring av Helse Stavangers  
konseptfase for sykehusutbygging

Oslo, 20.11.2015

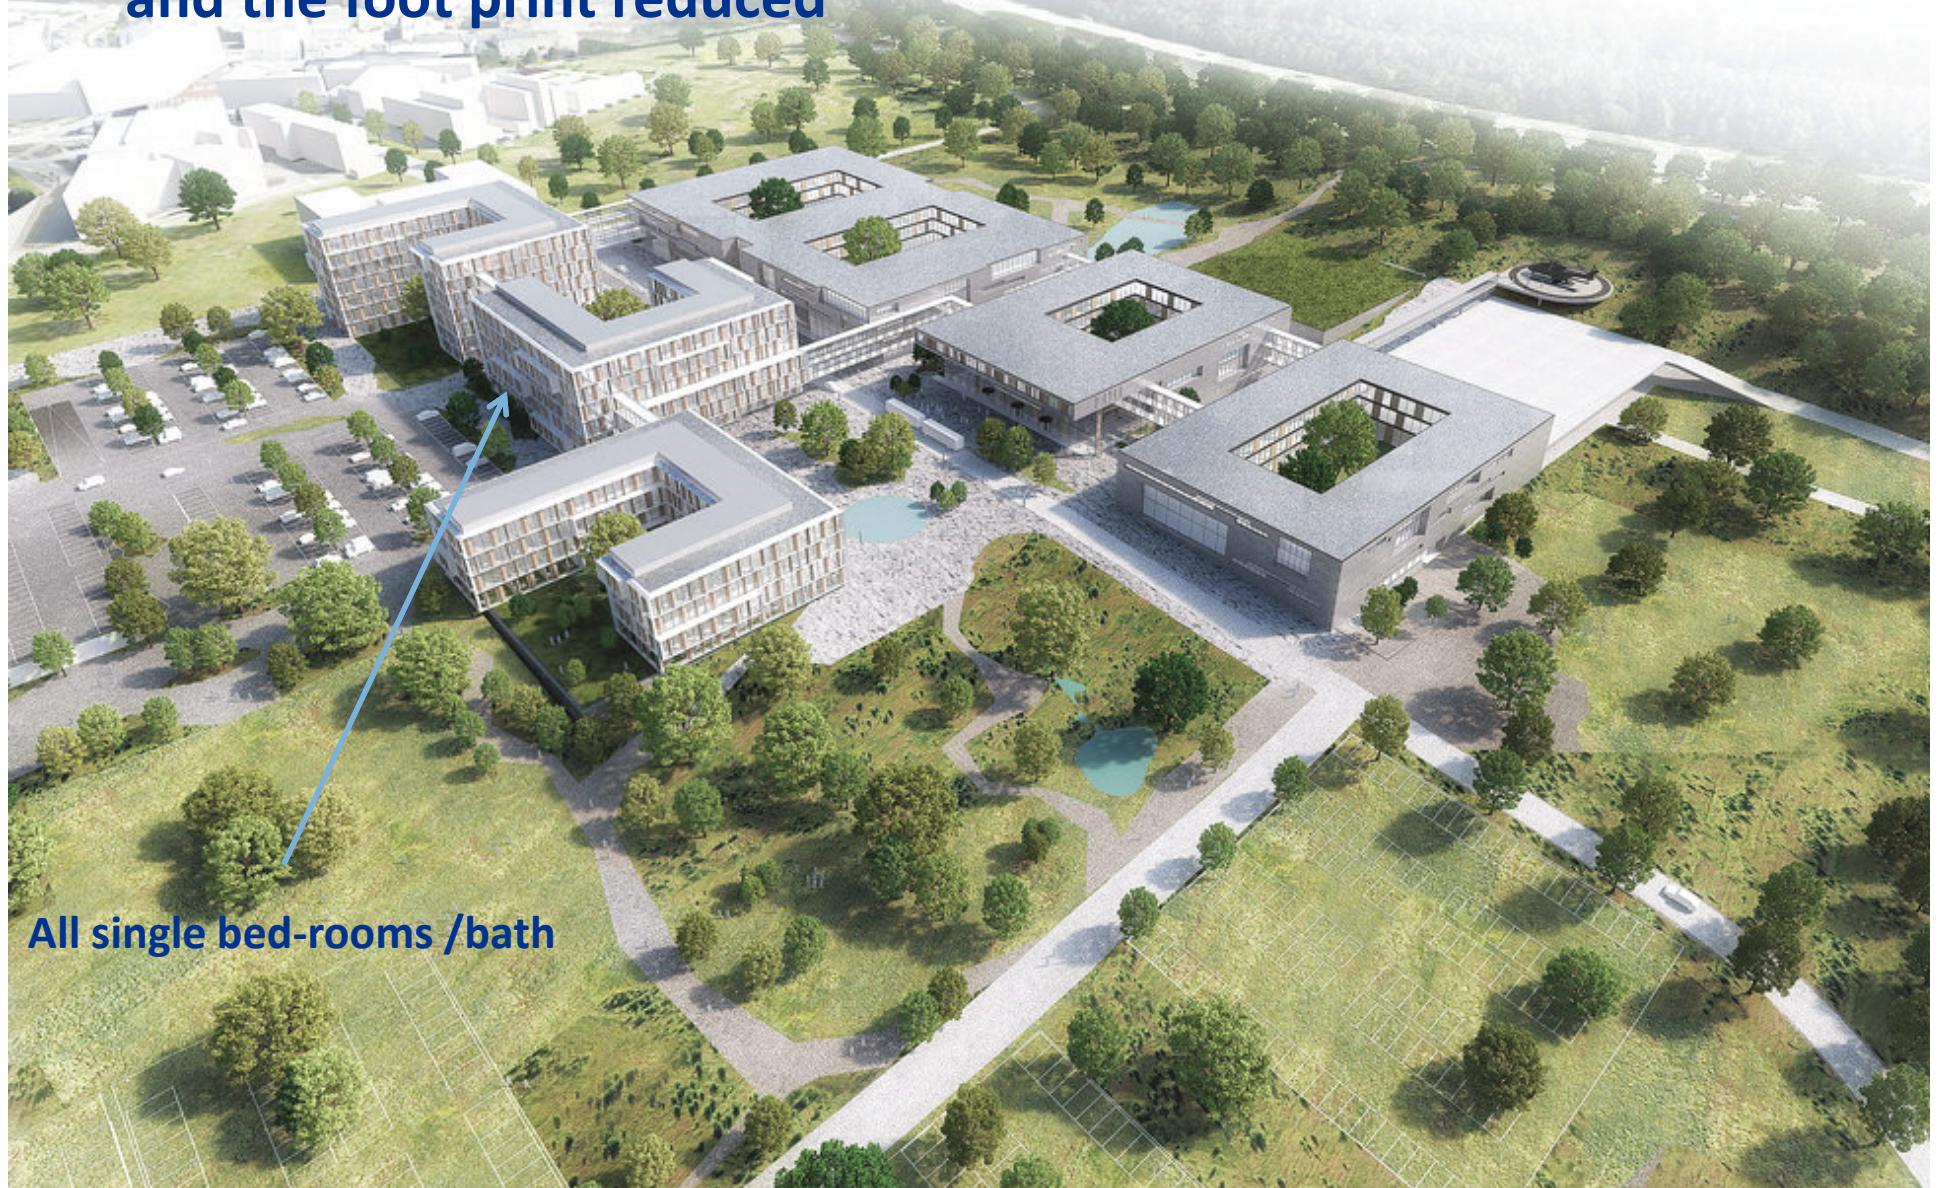

**KSK**  
**«Quality review report»**

# Overall conclusion:

- The Project is recommended to proceed past B3, and continue to the pre-engineering phase
- The Ullandhaug-alternative was considered the best alternative, overall, subject to some improvements

**Step 1 Ullandhaug –concept, ca. 95.000 m<sup>2</sup>, plan: finalised 2023**  
During the pre-enigneering phase the concept will be optimized  
and the foot print reduced

...and the decision is: Ullandhaug

8 billion NOK P85= step 1

• 11.januar 2016

Bent Høie twitret mandag 11. januar om at han ville fortelle hva som blir beslutningen for nytt sykehus på Solamøtet den ettermiddagen. På Solamøtet ble det klart at det nye sykehuset skal bygges på Ullandhaug.

Ullandhaug University area

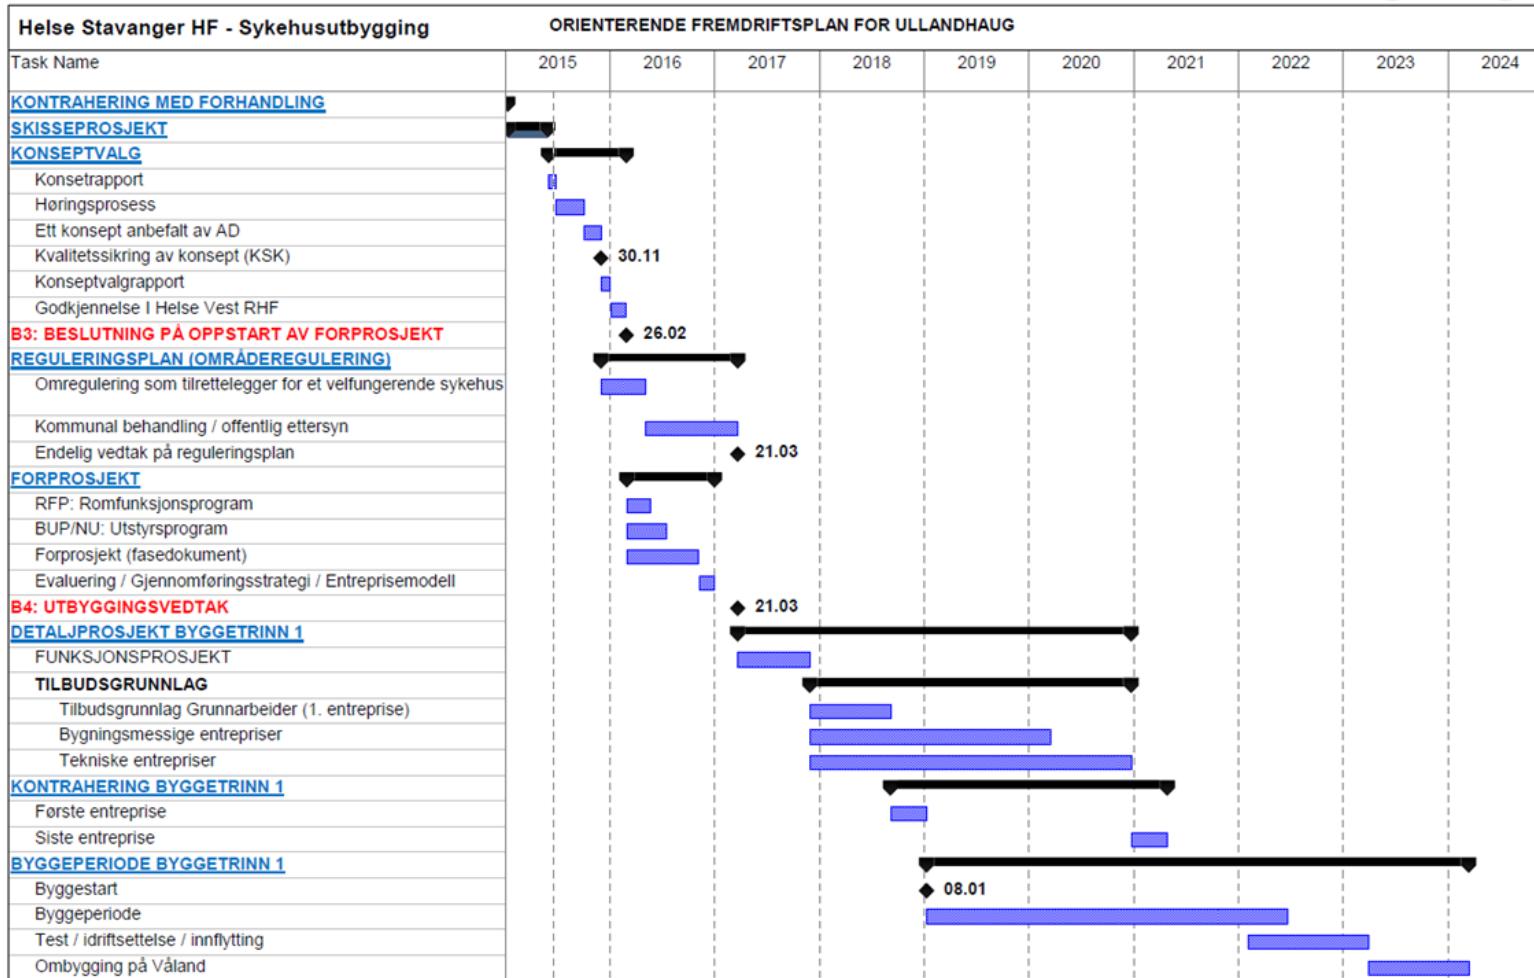

Where is SUS2023 located?

# Organisation chart pre-engineering

# Overall plan:

## 2. Experience transfer «as is»

---

# Planning the new hospital project in Helse Stavanger:

- A «once in a lifetime project» (100 years)
- Limited project competence within the local hospital organisation
- The planning process in compliance with the requirements described in the «best practice for early phase planning» -document
- External competence from consultancy companies needed
- Project Director appointed internally, but in-depth expertise hired from the external consultancy market for both the development plan and the Idea-phase continuing into the Concept phase
- All programming documents prepared with consultant in lead
  - HFP, DFP, HPU, OTP
- Experience/competence transfer through hospital visits and contacts with other projects, but not on a systematic basis
- **Keywords:** flexibility, standardisation, elasticity
- **The consultancy market = the experience transfer body**

# The new National Agency: Expectations

- A national/governmental Centre of Excellence responsible for:
- Developing standards, governing documents, best practices
- Project Management methods and models
- Project Management tools
- Experts in Hospitals (logistics, programming, costs etc)
- Competence in early phase development
- Peer reviews on demand
- Resources for early phase planning
- Bench marking figures
- Cost data-base for experience transfer ++

### 3. Learning across hospital projects through a shared evaluation agency

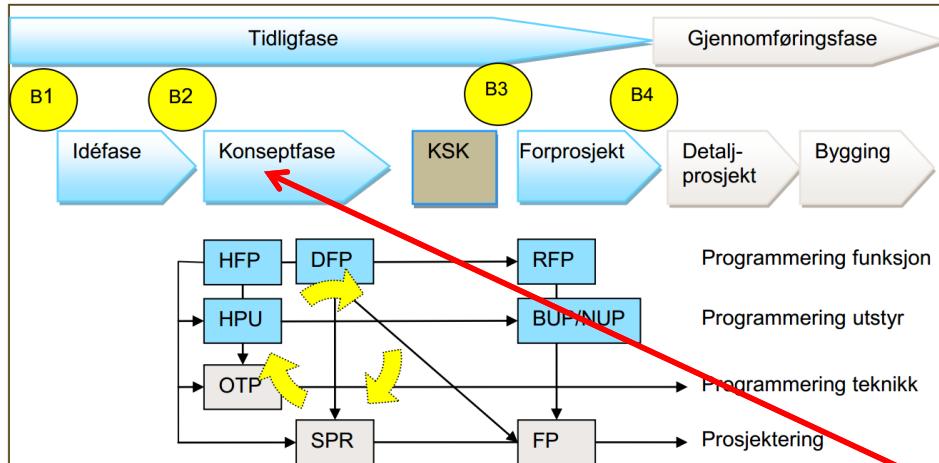

.....

Norwegian Hospital Construction Agency  
Sykehusbygg HF

# Sykehusbygg HF – overall purpose:

- Established October 2014, owned by the RHF (regional Health Authorities)
- Responsible for developing a highly competent environment for planning and construction of hospital projects
- Required for all hospital projects > 500 million NOK
- Contribute to provident development of hospital projects by learning across projects, evaluation, innovation, experience transfer and exchange of competence
- Deliver resources to all other HFs (Health Authorities)
- De-centralised organisation structure, head offices in Trondheim
- ...contribute to standardisation, experience transfer, optimal use of resources, all Project Directors to be employed by Sykehusbygg
- **But Project Owner will still be the financing body (Helse Stavanger HF for SUS2023)**

# How should the competence and experience be transferred?

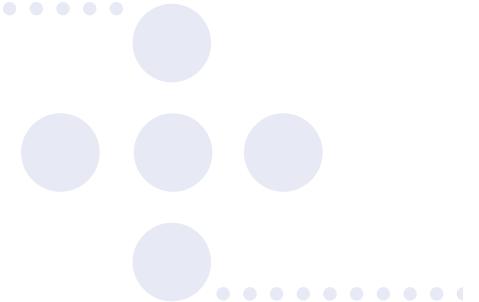

1. Primary source: Digitalised through the homepage of Sykehusbygg HF
  1. Based on the «early-phase planning model», [clickable](#)
  2. All working processes described, including programming and best practices
  3. Organisational charts/agreements/best practice documents etc
2. Networking, work-groups, seminars, NTNU?, peer reviews

# What do we mean by standardisation?

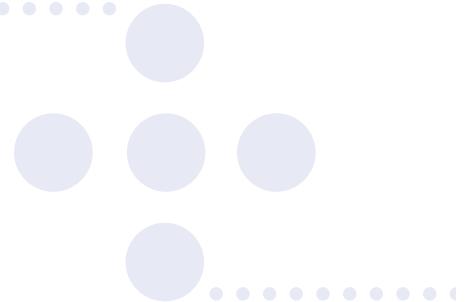

- Need to define what should be requirements and what is best practice!
- Divide between early phase and execution phase
- Early phase:
- At B3: requirements rather than best practices

# Early phase: standards needed for:

- Work processes
  - Including organisational models
- Methods/models describing:
  - Models for projection (should be a common, required method)
  - How to calculate capacity and space/area-requirements
  - Logistics (patients and goods)
  - ICT
  - Execution models
- Assumptions behind estimates of area/size?
  - Opening hours
  - Occupancy rate and average days in hospital
  - Space requirements for different types of rooms (operating theaters, bedrooms etc)
- Project reserve (P85 vs P50)
- How to calculate efficiency gains

# Execution phase: standards needed for:

- **Detail engineering/construction phase:**
  - Execution models
  - Reporting formats(for both Sykehusbygg HF and project owner)
  - Project tools:
    - Project planning tools
    - Project control
    - Project management («all inclusive»)
    - Common tools for comparing/benchmarking
  - Project work breakdown structure

# What kind of competence should be available?

- «Start-packages» for early-phase projects?
- Standards and guidelines
- Experience transfer reports, and database
- Cost databases/benchmarking data
- Project reports
- Research reports/results
- Best practice documents
- News/trends?

# Area/room-standards from HFP

## Need to develop standards wrt programming!

Kvm netto	HFP SUS	Bemerkning	NØS	St. Olavs Hospital	Nye A-hus
Kliniske funksjoner					
Sengeområder normal	30		27,8	24 (BT1)	27,6
Dagplass somatikk	20		15	15	15

Kontorplasser administrasjon	9		9	10	10
Møterom	1,8	pr. plass	1,8	1,7	1,7

## 4. Pitfalls

---

# Pitfalls:

- Becoming too bureaucratic
- Conservative, preventing innovation to take place
- Need to maintain the collaboration with the consultancy market both for knowledge sharing and resources
- The main focus for Norwegian Construction Agency (Sykehusbygg HF): project development in **the early phase**
- In the construction phase, consultants have the expertise
- «More of the same» (limit international influence)
- Important to maintain input from other industries
- Through NTNU and other bodies!

# Organisational development

- «Patient first»
- Organisational development needed
- Lean-hospital thinking
- Work processes should be re-designed and tested/implemented before SUS2023 is finalised
- Changes to the project needed?

The screenshot shows a press release from the Ministry of Health (Helse- og omsorgsdepartementet) dated January 7, 2014. The title is "Pasientens helsetjeneste". The text discusses the government's commitment to patient-centered care, mentioning the Minister of Health Bent Høie and the Minister of Health and Care Services. It outlines six key areas of focus:

1. Ta i bruk mangfoldet ved å innføre fritt behandlingsvalg. Venntiden skal ned. Kvaliteten skal opp. De regionale helseforetakene skal kjøpe flere tjenester hos private og ideelle. Fritt behandlingsvalg innen rus og psykisk helsevern er planlagt innført i 2015.
2. Sørge for raskere diagnose og redusert ventetid for kreftpasienter. Kreftloftet til regjeringen bygger på konkrete endringer i organiseringen av norsk kreftbehandling. Den har tre hovedelementer: Tverrfaglige diognosenter for alvorlig sykdom i alle helseregionene i løpet av 2014, standardiserte pakketorloper i kreftbehandling, og bedre samarbeid med fastlegene.
3. Lage opprappningsplan for rusfeltet og bygge ut det psykiske helsetilbuddet i kommunene. Regjeringen vil prioritere rusbehandling og psykisk helse, og løfte frem pasientgruppene som har sittet "medest ved bordet".
4. Legge fram en Nasjonal helse- og sykehushplan som gjør oss i stand til å planlegge en helsetjeneste med kapasitet og kompetanse til å møte fremtidens behov. Målet er å legge frem planen for Stortinget i 2015.
5. Skape bedre kvalitet og pasientsikkerhet plennom endring i ledelse, systemer og kultur. Regjeringen vil gjennomføre flere kvalitetsundersøkelser, stablere en uavhengig undersøkelseskommisjon og legge frem en årlig melding om kvalitet og pasientsikkerhet for Stortinget. En forsakordning med kvalitetsbaseret finansiering av spesialisthelsetjenesten for innføres for å rette oppmerksomheten mot kvalitet.
6. Satse på IKT og kommunikasjon. Nytt lovforslag skal sikre at pasienten settes i sentrum. Personvern skal styrkes i IKT-løsningene. Digitale tjenester skal forenkle pasientenes kontakt med helsetjenesten, og pasienten skal ha enkel og trygg tilgang til egne helseopplysninger. Regjeringen ønsker en gjennomgang av IKT-organisaseringen i helse- og omsorgssektoren for å sikre effektiv organisering og bruk av ressursene. Regjeringen har etablert et eget helseforsretak for strategisk samarbeid på IKT-området, som skal ha hovedkontor i Bergen.
