## ENERGY VAASA

### ENERGYWEEK

EnergyWeek 2017 in March was a great success! See you again 19th – 23rd March 2018.

### VAASA - WORK RIGHT!

Vaasa has the vision and the ecosystem for a gigafactory, and much more.

### ENERGYVAASA SHORTLY

EnergyVaasa information and background – download material

### R&D INVESTMENTS

### ENERGYVAASA IS THE LEADING ENERGY CLUSTER IN THE NORDIC COUNTRIES

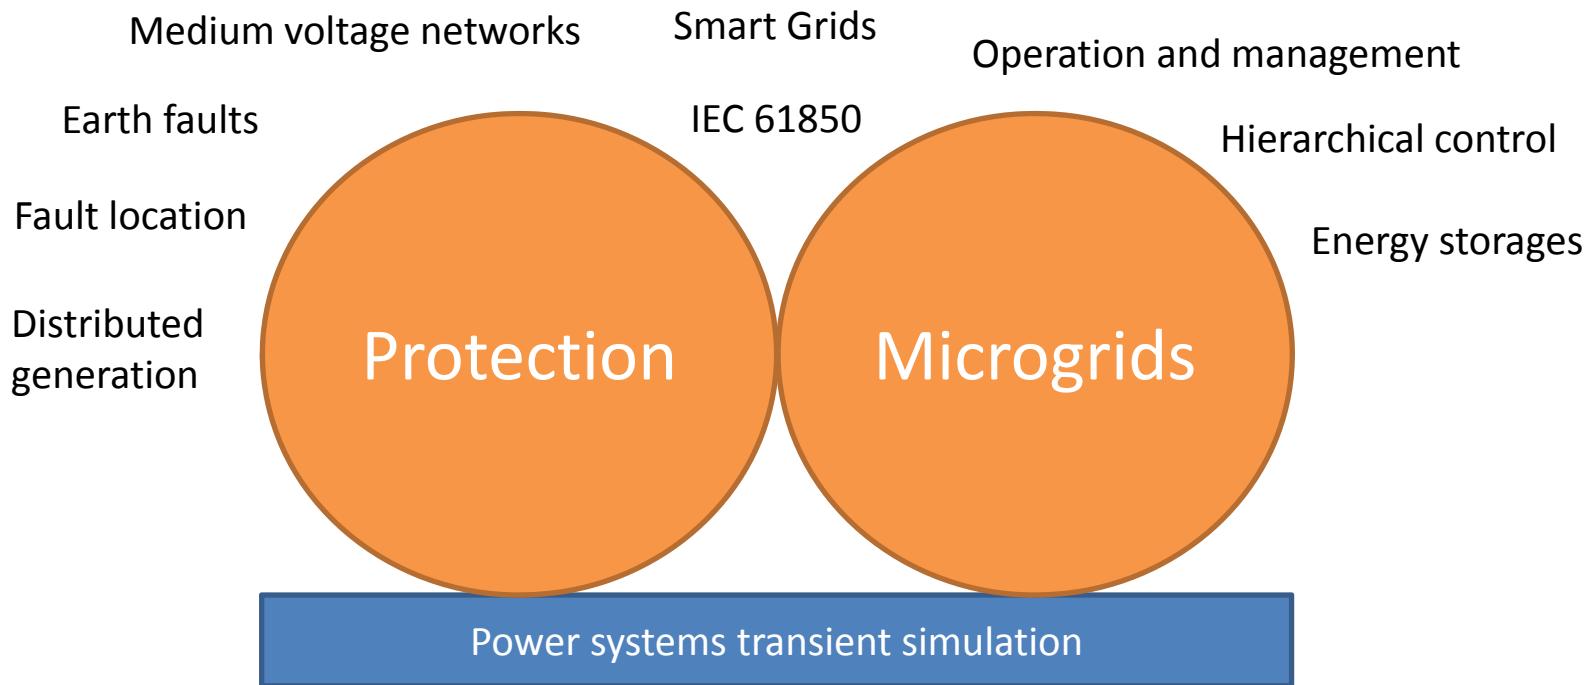

More than 140 businesses, several of which are global market leaders in their field – Total business turnover some EUR 4 billion annually, export rate over 80% – 30% of Finland's total export in energy technology – Number of employees 10,000

## LATEST NEWS

# Research focus in Electrical Engineering

# Simulation of electric power systems

- Electromagnetic Transient Simulation
  - Power system is simulated with time step ranging down to nanoseconds
  - Commercial software applied: PSCAD ([www.pscad.com](http://www.pscad.com))
- Ideal for studying
  - Faults
  - Switchings
  - Harmonics
- History:
  - Started as a competence building project with ABB in 1996
  - VEI simulation group provides now simulation services to companies
  - Simulation expertise has been used in several national research projects

# Protect-DG

New techniques for the management of power system faults and distributed generation

Vaasan yliopisto  
UNIVERSITY OF VAASA

LUT  
Lappeenranta  
University of Technology

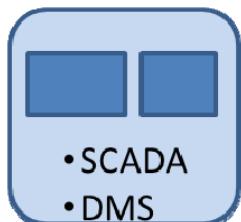

Leverage from  
the EU  
2014–2020

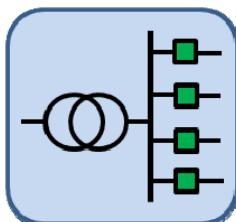

IEC 61850

LoM protection

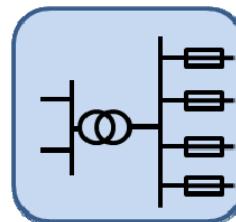

Fault locating

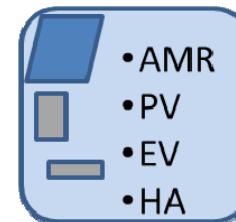

Control Center  
- Fault locating

Primary  
Substation  
- Signal transmission  
- IEC 61850

Secondary  
Substation  
- Fault detection  
- Signal detection

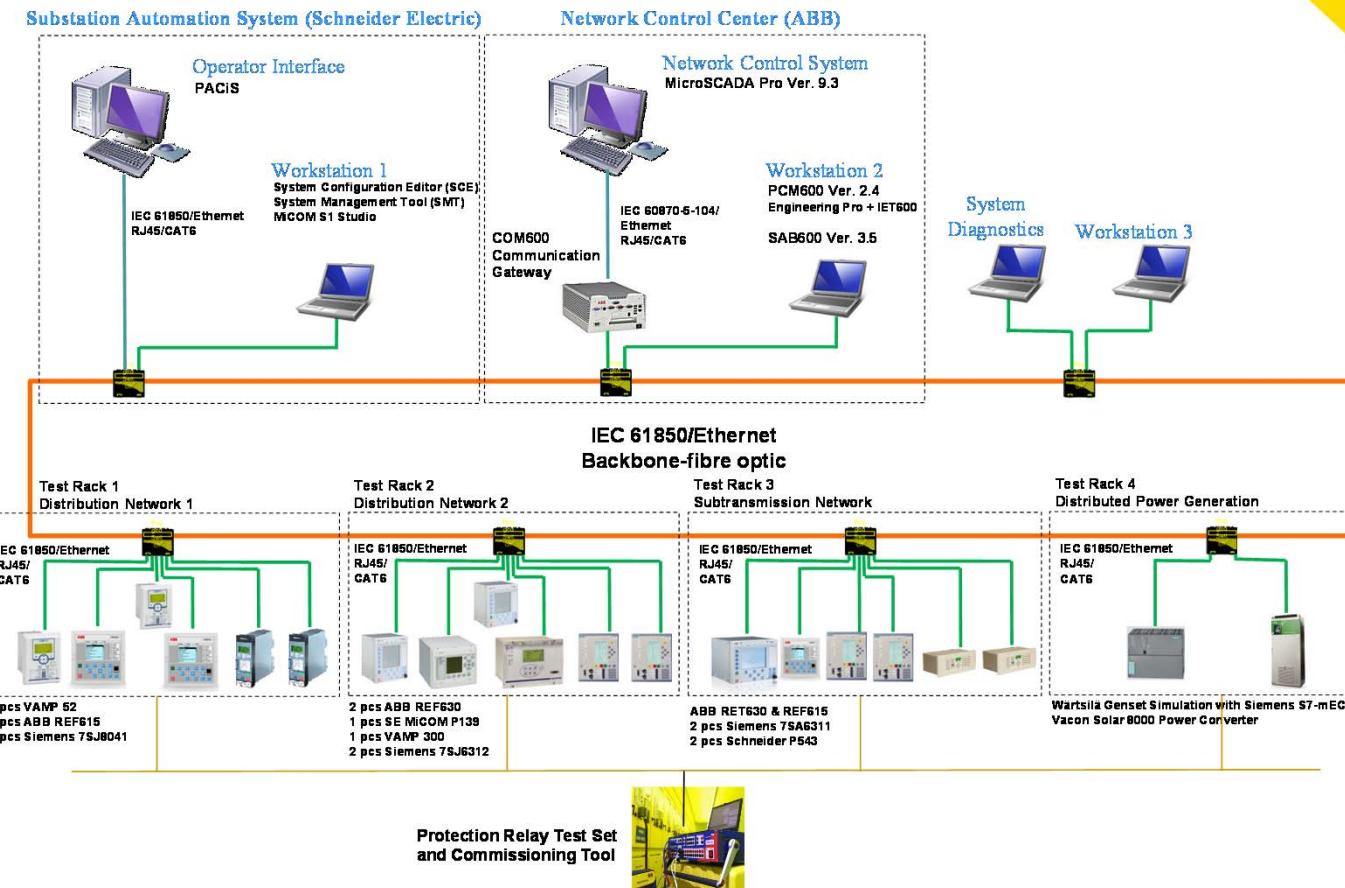

Customer  
- 61850 comm.  
- PV or other DG  
- LoM

Industrial partners: ABB, Arcteq, Elenia, Emtele, Helen, Maviko, ST-pooli, Tekla, Vamp, Vaspec

# IEC 61850 multi-vendor environment

Projects: DEMVE (2011-2014), eDEMVE (2015-2016)

# PAC laboratory

## PROTECTION AUTOMATION COMMUNICATION

23.5.2017

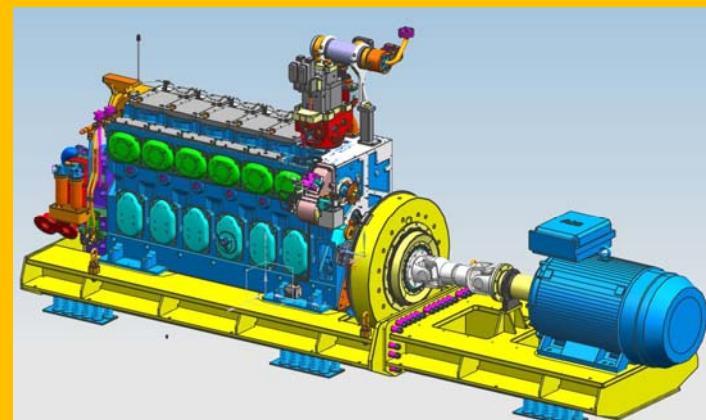

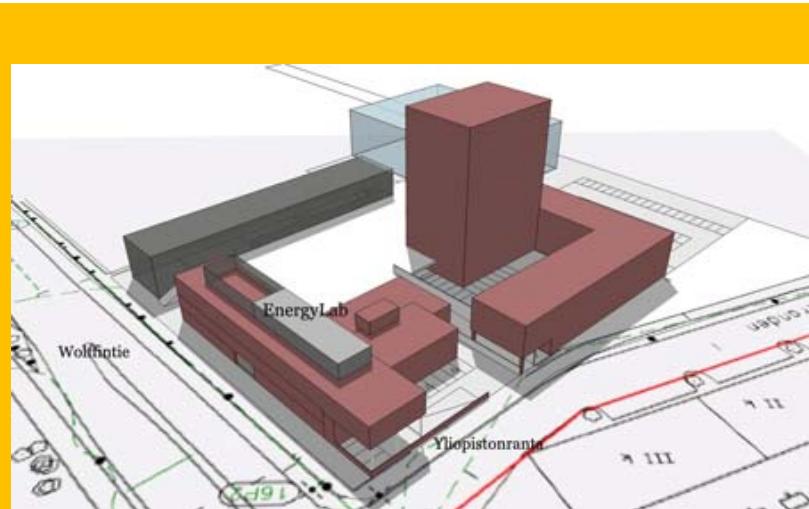

University of Vaasa | Kimmo Kauhaniemi

7

# VEBIC

## Vaasa Energy Business Innovation Centre

- A multi-disciplinary research platform bringing together knowledge from all faculties of the University of Vaasa
- Laboratory facilities
  - 1st phase (now under commissioning):
    - Engine and fuel laboratories
  - 2nd phase (in future):
    - Smart Grid laboratory

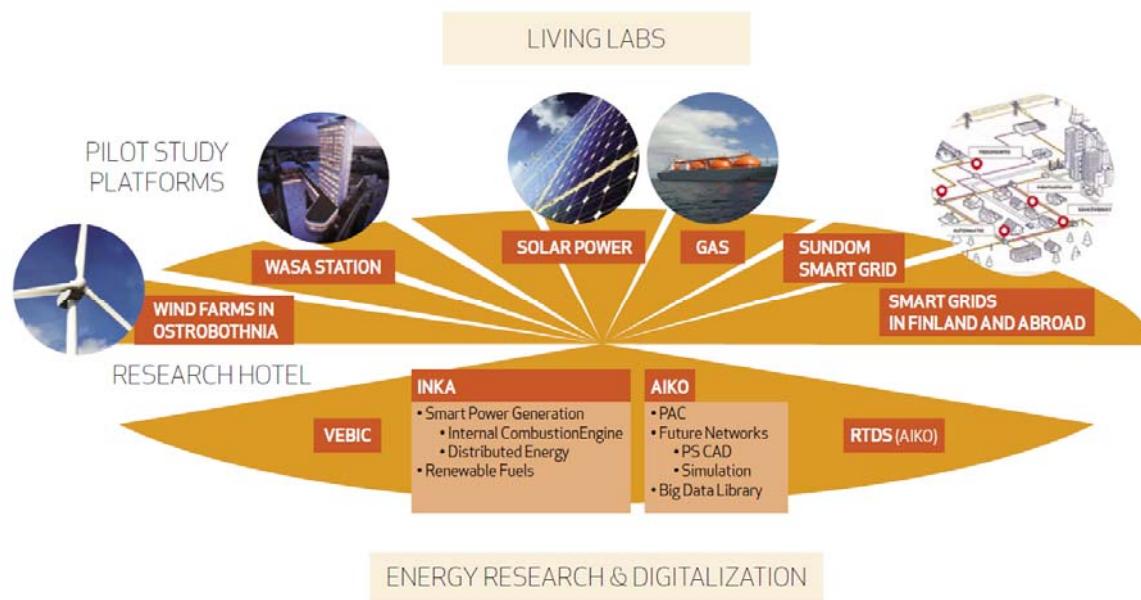

# Engine laboratory

- Two medium-speed gas and diesel engines
  - One complete or “all-cylinder” engine
  - One single-cylinder research engine, “SCE”
- One to three high-speed gas and diesel engines
- Electric equipment
  - Generators
  - Frequency converters
  - Transformers
  - Switchgears
- Automation systems
  - Process (engine) automation
  - Protection relays
  - Data acquisition systems

# Kasvusopimus (Growth agreement) AIKO

- Government funding for promote innovations and business in selected areas

# SESP – Smart Energy Systems Research Platform

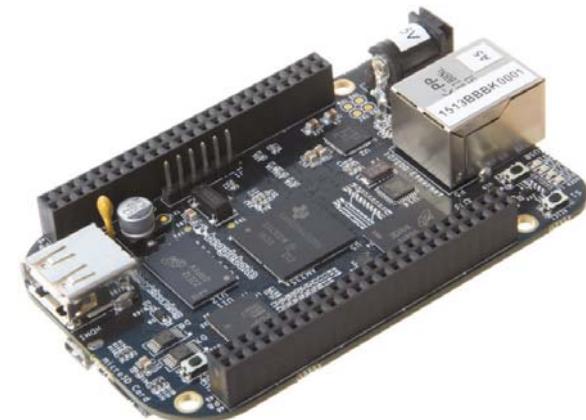

- Smart Grid laboratory
  - PAC laboratory
    - Protection and automation
    - Microgrids
    - Communication
  - Real time digital simulation
- Big Data
- Living lab sites
- New business concepts and models

# Light-Weight IEC 61850 IED

- Single board computer (SBC)  
BeagleBone with open source IEC  
libraries (libIEC61850)
- Enables implementation  
and demonstration of  
applications with new LNs  
that are not yet available  
in commercial products

# Living lab site: Sundom Smart Grid

On-line measurements:

- One HV/MV substation (all feeders)
- Three secondary substations (MV/LV)

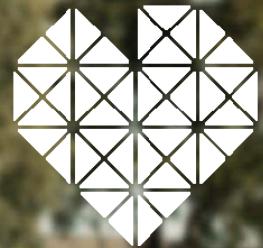

Total 20 measurement points

- IEC 61850-9-2 stream with current and voltage measurements, 80 samples/cycle
- Power, RMS voltages and currents etc. measurements with lower sampling rate (GOOSE)

Thank you!
