AARHUS UNIVERSITY - CAMPUS 2.0

Aarhus University is creating the campus of the future

With the acquisition of the former municipal hospital property (now called University City), AU has been given a unique opportunity to consolidate and strengthen a number of educational and research activities on the university's central campus in Aarhus. Therefore, the university board has adopted a master plan for moving into the new facilities and taking them into use. The plan also means that AU will be leaving other areas both inside and outside of Aarhus.

Ten principles for The University of Tomorrow

In June 2017, Aarhus University's board approved ten general principles to guide the strategic development of the university campus over the coming years – for example, in connection with the takeover of the Municipal Hospital's areas on Norrebrogade in 2019.

Aarhus University's campus shall:

1. promote integration of research and education
2. promote interdisciplinary research, education and innovation
3. promote future forms of teaching
4. be a flexible study environment with many places for study
5. be an international campus
6. be able to offer housing to students and researchers
7. promote collaboration with the business community and the local community
8. be enhanced by non-university activities
9. be a car-free area
10. be sustainably developed.
