# Supply Chain Vulnerabilities in the Norwegian Power Grid

Exploring IT/OT integration, third-party dependencies, and acceptable risk

## Uncovered serious safety risk – Chinese electric buses can be stopped and turned off from China

A security test Ruter has conducted revealed that Chinese electric buses in Norway can be controlled from China.

*What are the consequences if the Norwegian power grid has similar security flaws?*

## IT/OT integration opens new vulnerabilities

- *Supply chains* becomes more complex
- New attack surfaces arise

**We seek interviewees** that are stakeholders in the Norwegian power grid!

- What are the new risks?
- How acceptable are the risks?
- and more...
