A number of methods of Prognostics and Health Management (PHM) have been developed (and more are being developed) for use in diverse engineering applications. Yet, there are still a number of critical problems which impede full deployment of PHM and its benefits in practice. In this lecture, we look in some of these PHM challenges and look out to advancements for PHM deployment.

Enrico Zio is full professor at the Centre for research on Risk and Crises (CRC) of Ecole de Mines, ParisTech, PSL University, France, full professor and President of the Alumni Association at Politecnico di Milano, Italy.

His research focuses on the modeling of the failure-repair-maintenance behavior of components and complex systems, for the analysis of their reliability, maintainability, prognostics, safety, vulnerability, resilience and security characteristics, and on the development and use of Monte Carlo simulation methods, artificial intelligence techniques and optimization heuristics.

In 2020, Professor Zio has been awarded the prestigious Humboldt Research Award from the Alexander von Humboldt Foundation in Germany.
