

# CDIO Standards – an Active Learning exercise

***Europe-UK & Ireland Regional Meeting 2021***

**Dr Matt Murphy**

Director of Education

Department of Mechanical, Materials &  
Aerospace Engineering

University of Liverpool, UK

***CDIO Council Member-at-Large***

**Dr. Sc. Juha Kontio**

Dean

Faculty of Engineering and Business  
Turku University of Applied Sciences  
Finland

***CDIO Council Member-at-Large***

# Importance of Activating Learners

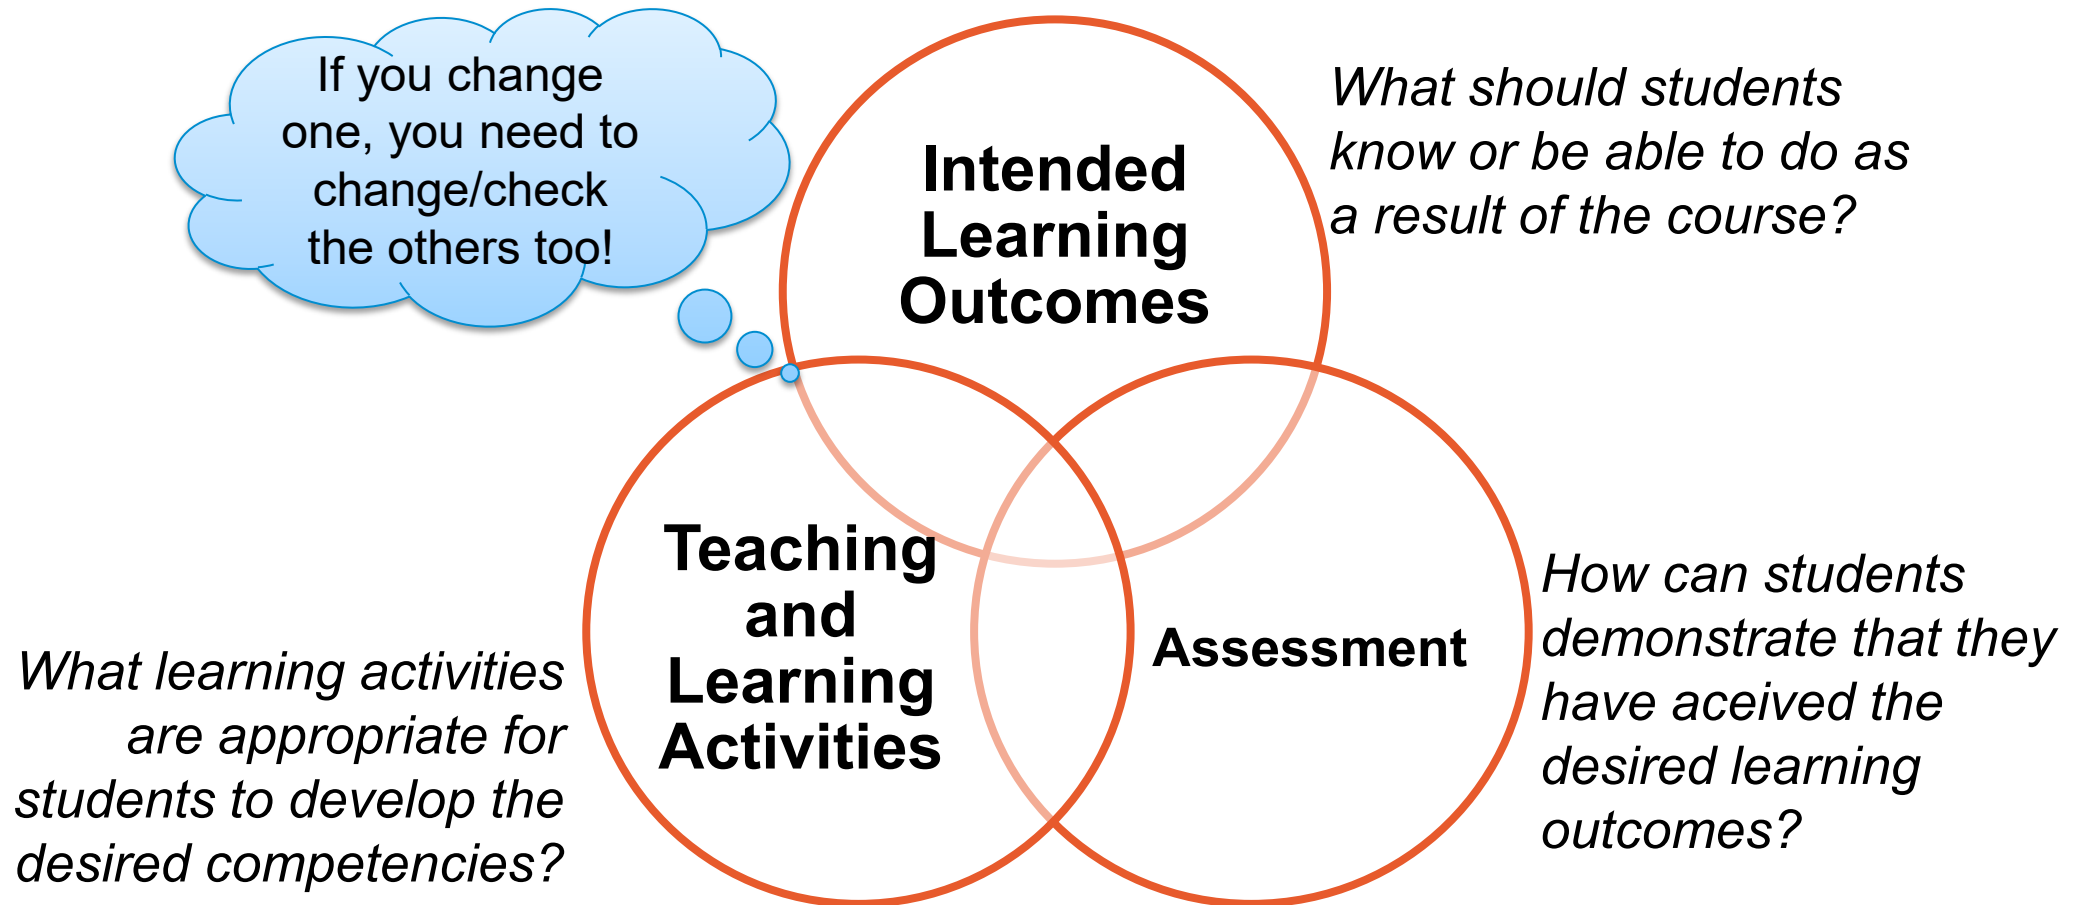

“...the teacher’s fundamental task is to **get students to engage in learning activities** that are likely to result in their achieving the desired outcomes.

Remember that **what the student does is actually more important** in determining what is learned than what the teacher does.”

*Shuell, T. J. (1986). Cognitive conceptions of learning. Review of Educational Research, 56(4), 411-436.*

# Constructive alignment: aligning competences, activities and assessment

# Our intended learning outcomes for this session are:

1. to **understand** the purpose of CDIO standards
2. to **learn** about 5 of the CDIO standards

# Our learning activities for this session are:

You will **experience** 3 active learning methods that can be used in the classroom:

- Jigsaw Classroom
- Audience Response Systems
- 1-Minute Paper

... and one of those teaching and learning activities is:

*The tool for activating you*

- Use your mobile or other device and go to:  
<http://www.socrative.com/>
  - Choose 'Student Login'
  - Write Room name: **TELI2020**
- Input your "name" and join the competition..

STUDENT LOGIN

TEACHER LOGIN

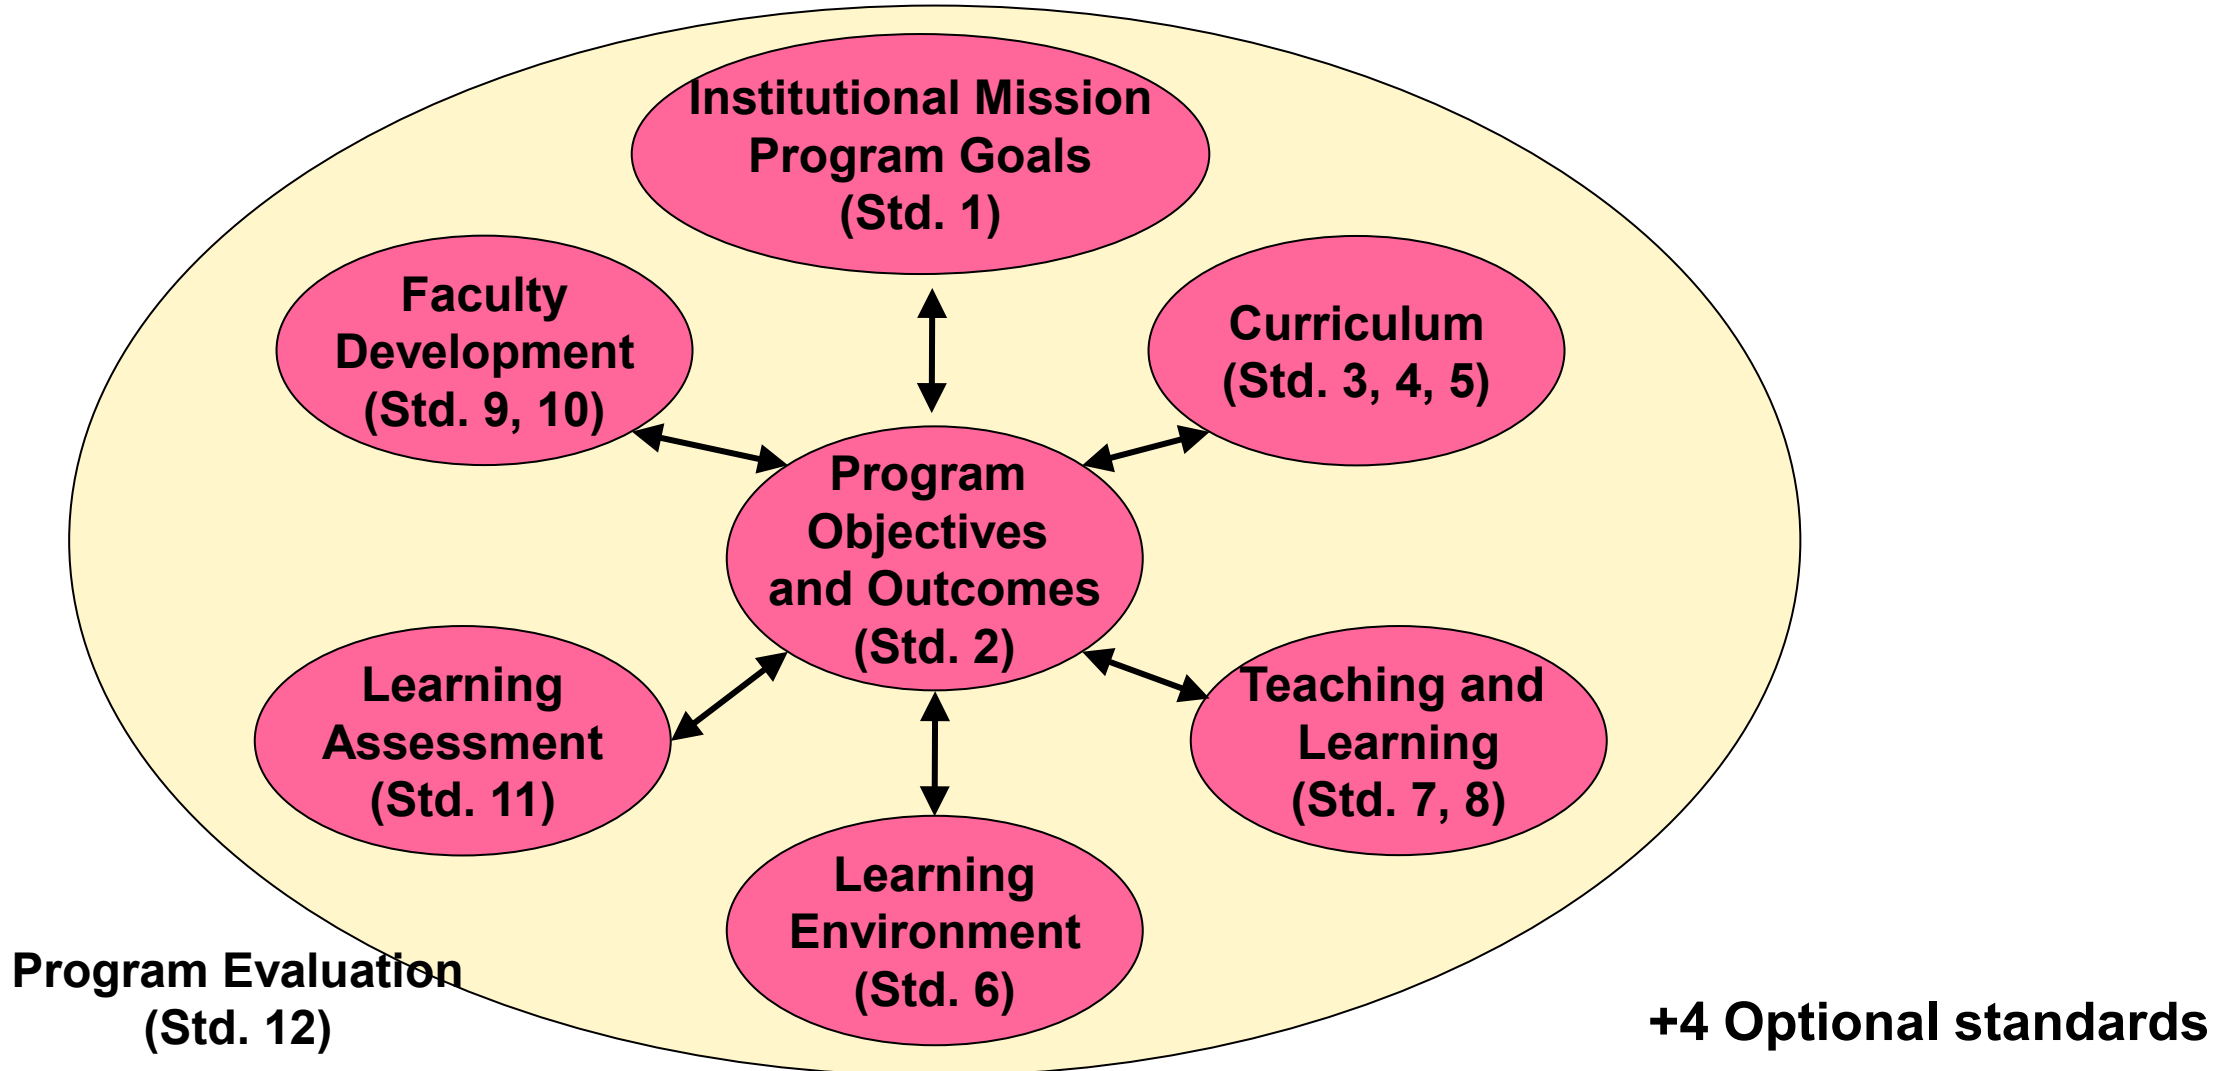

A screenshot of the "Student Login" form. The form has a light blue background. At the top, it says "Student Login". Below that is a label "Room Name" followed by a white input field. A yellow circle highlights the input field. At the bottom of the form is a large orange button with the word "JOIN" in white capital letters.

English

# **Test question:**

**Where are you from?**

# CDIO standards – best practices

# 12 (+4) CDIO Standards – Best Practices

## 1. CDIO as Context

Adoption of the principle that product and system lifecycle development and deployment are the context for engineering education

## 2. Learning Outcomes\*

Specific, detailed learning outcomes for personal, interpersonal, and product and system building skills, consistent with program goals and validated by program stakeholders

## 3. Integrated Curriculum

A curriculum designed with mutually supporting disciplinary subjects, with an explicit plan to integrate personal, interpersonal, and product and system building skills

## 4. Introduction to Engineering

An introductory course that provides the framework for engineering practice in product and system building, and introduces essential personal and interpersonal skills

## 5. Design-Implement Experiences

A curriculum that includes two or more design-implement experiences, including one at a basic level and one at an advanced level

## 6. Engineering Workspaces

Workspaces and laboratories that support and encourage hands-on learning of product and system building, disciplinary knowledge, and social learning

## 7. Integrated Learning Experiences

Integrated learning experiences that lead to the acquisition of disciplinary knowledge, as well as personal, interpersonal, and product and system building skills

## 8. Active Learning

Teaching and learning based on active experiential learning methods

## 9. Enhancement of Faculty Competence

Actions that enhance faculty competence in personal, interpersonal, and product and system building skills

## 10. Enhancement of Faculty Teaching Competence

Actions that enhance faculty competence in providing integrated learning experiences, in using active experiential learning methods, and in assessing student learning

## 11. Learning Assessment

Assessment of student learning in personal, interpersonal, and product and system building skills, as well as in disciplinary knowledge

## 12. Program Evaluation

A system that evaluates programs against these 12 standards, and provides feedback to students, faculty, and other stakeholders for the purposes of continuous improvement

### Optional standards:

1. Sustainable development
2. Simulation-based mathematics
3. Engineering entrepreneurship
4. Internationalization & mobility

# General structure of standards

## Description

- The description elaborates the statement of the standard, explaining its meaning.
- It defines significant terms and provides background information.

## Rationale

- The rationale highlights reasons for the adoption of the standard.
- Reasons are based on educational research and best practices in engineering and higher education.
- The rationale explains ways in which the standard distinguishes the CDIO approach from other educational reform efforts.

## Rubric

- A rubric is a scoring guide that seeks to evaluate levels of performance.
- The rubric of the CDIO Standards is a six-point rating scale for assessing levels of compliance with the standard.
- Criteria for each level are based on the description and rationale of the standard.
- The rubric highlights the nature of the evidence that indicates compliance at each level.

# CDIO Standard 8: Active Learning

**Teaching and learning is based on active and experiential learning methods**

- **Engage** students directly in thinking and problem solving
- **Help** students recognize what and how they learn
- **Increase** student learning motivation
- **Help** students form habits of lifelong learning

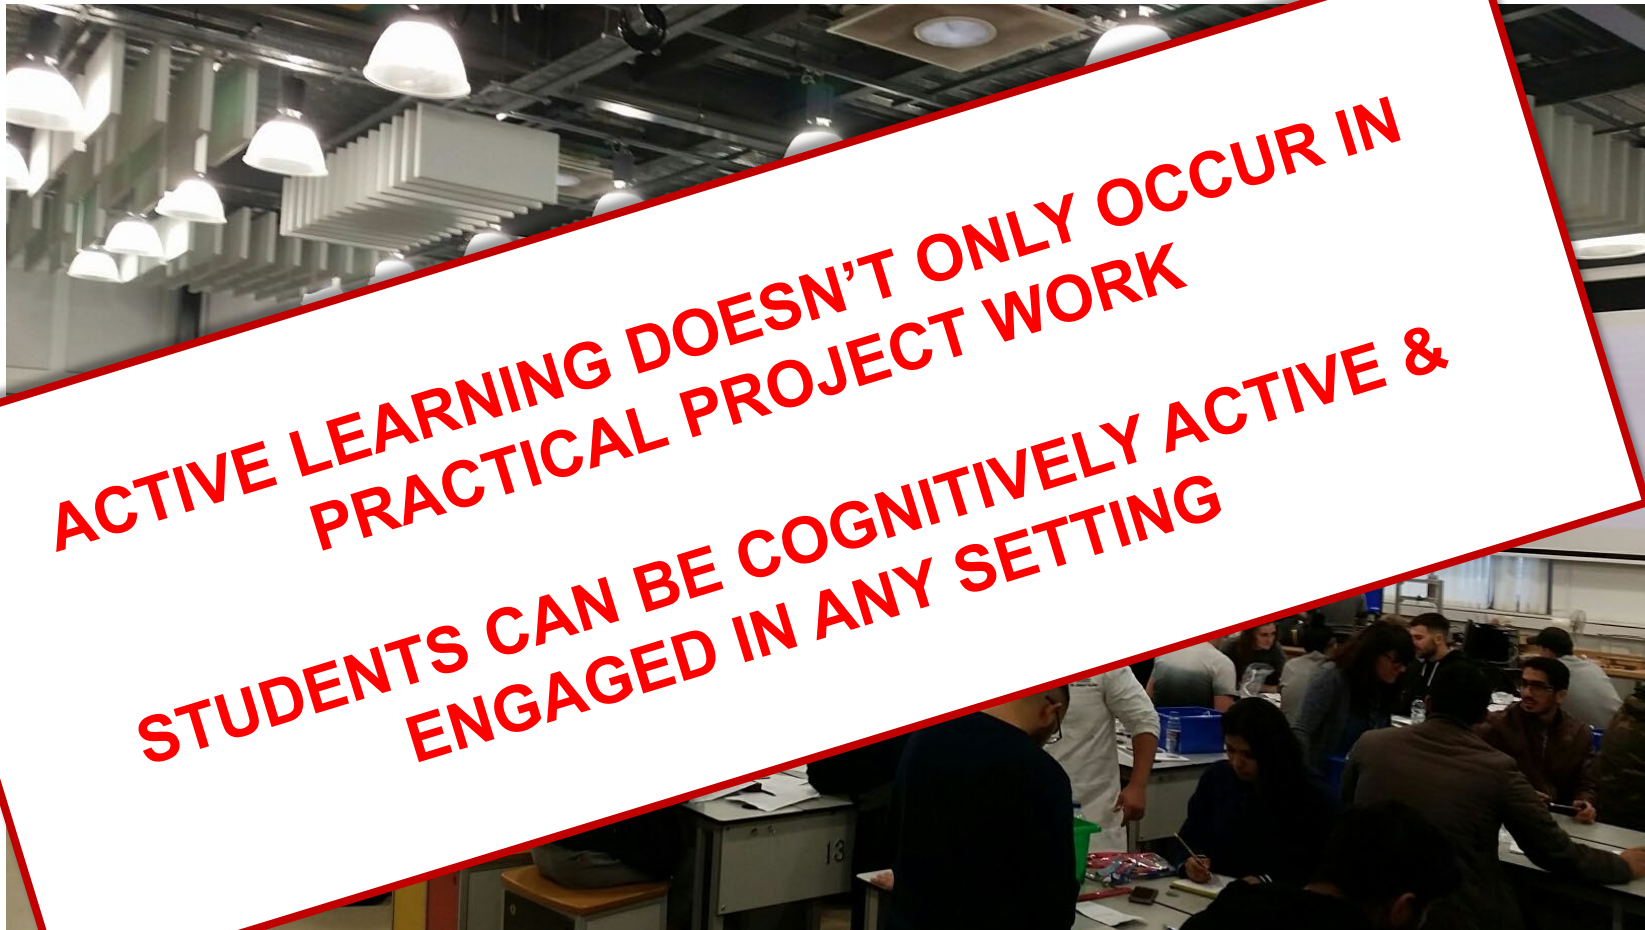

University of Liverpool, UK, Engineering Active Learning Laboratory

# Active Learning

120 1<sup>st</sup> year Mechanical Engineering students

Sem1 Introductory Design-Build-Test project: ***Dragster Racing***

ACTIVE LEARNING DOESN'T ONLY OCCUR IN  
PRACTICAL PROJECT WORK  
STUDENTS CAN BE COGNITIVELY ACTIVE &  
ENGAGED IN ANY SETTING

# Active vs Experiential Learning

## ACTIVE LEARNING

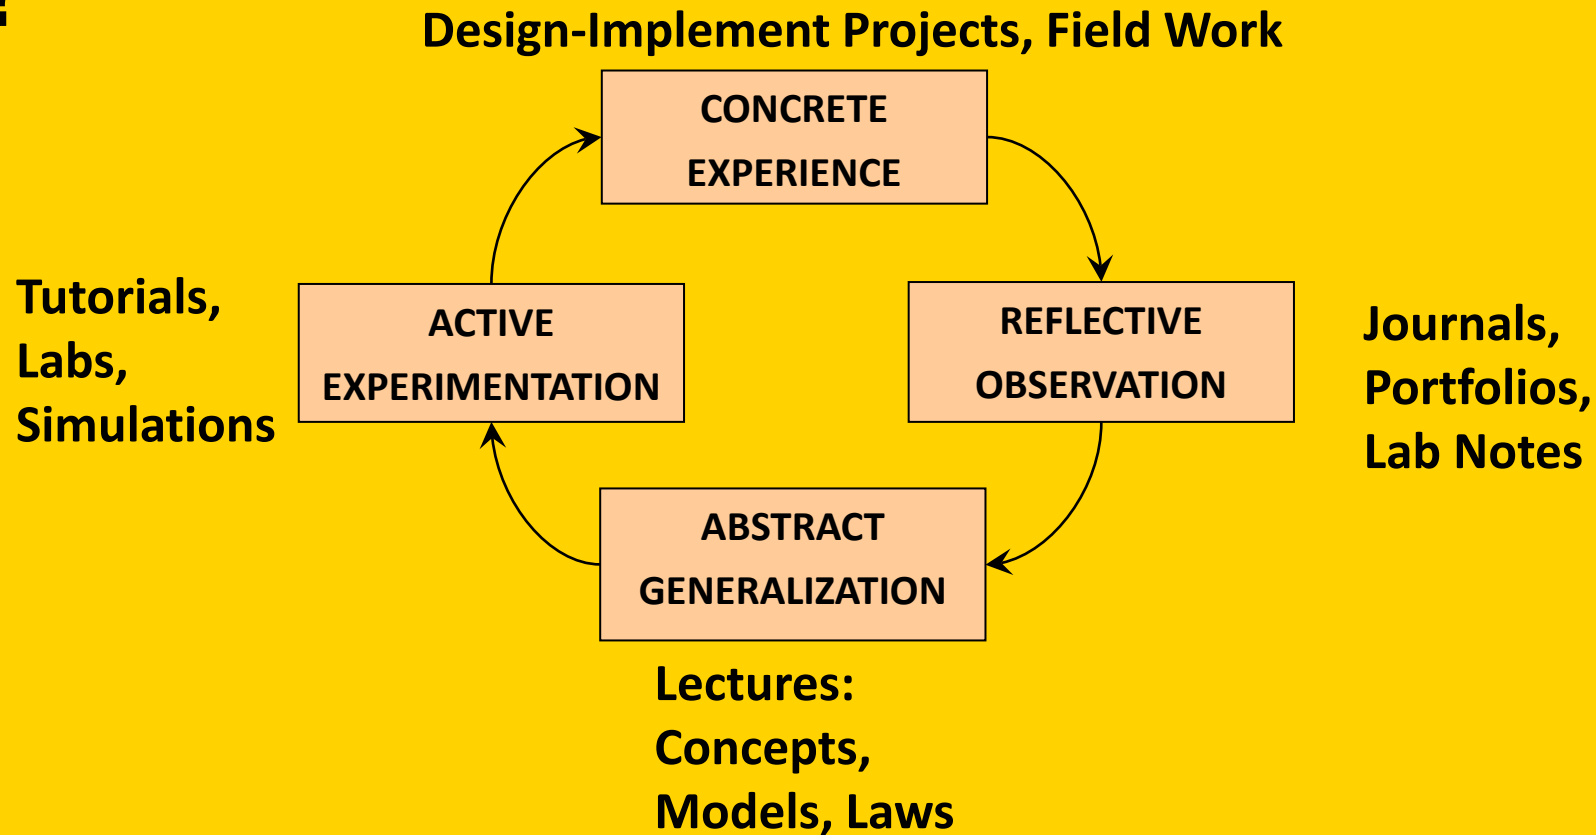

- **Engages** students directly in **thinking** and **problem solving activities**
- Emphasis on engaging students in manipulating, applying, analyzing, and evaluating ideas
- Examples:
  - Pair-and-Share
  - Group discussions
  - Recitation / Ticking
  - Concept questions

## EXPERIENTIAL LEARNING

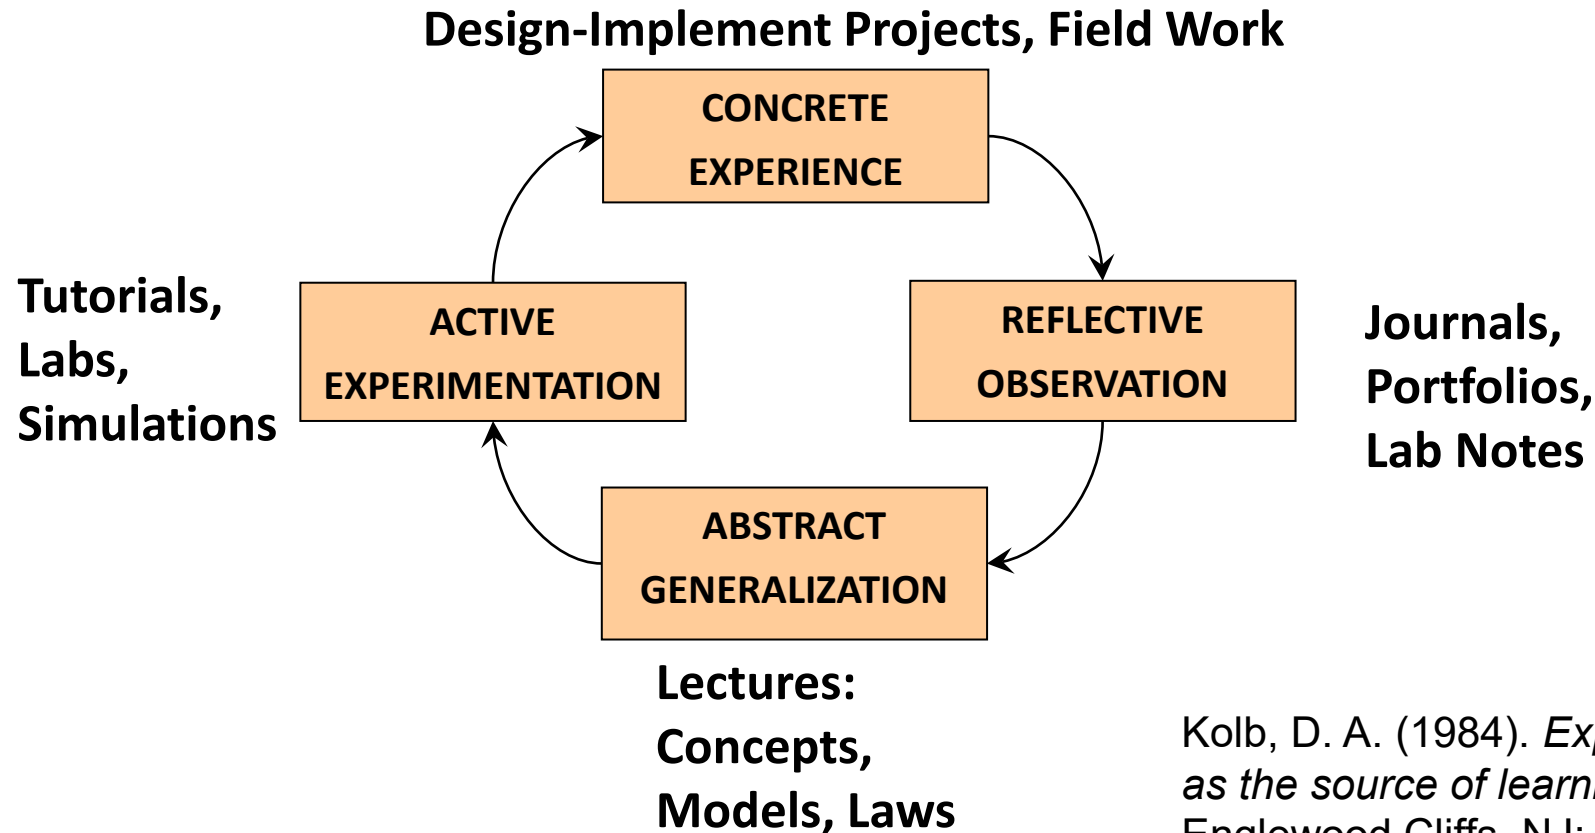

- Active learning in which **students take on roles that follow professional practice**
- Examples:
  - Design-implement experiences
  - Problem-based learning
  - Project-based learning
  - Simulations
  - Case studies

# New question:

## Who developed this experiential learning cycle?

# ***Experiential Learning Cycle:*** variety in learning methods

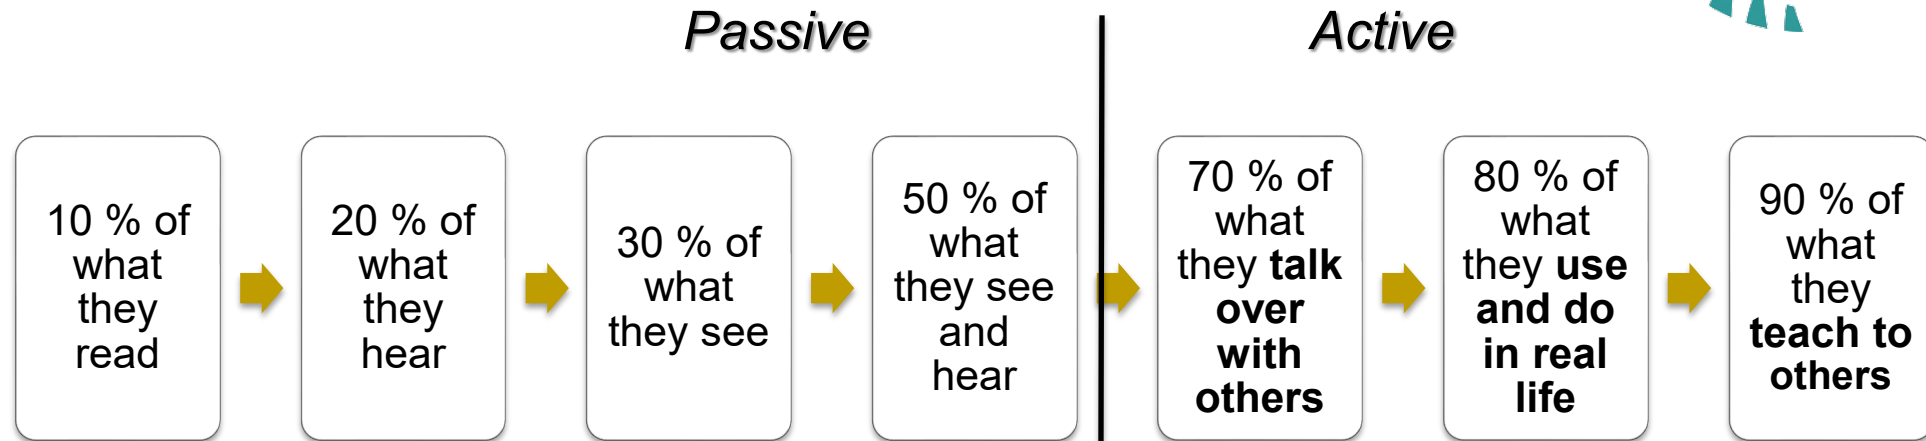

Kolb, D. A. (1984). *Experiential learning: Experience as the source of learning and development* (Vol. 1). Englewood Cliffs, NJ: Prentice-Hall.

# **New question:**

**The "learning pyramid" suggests that most people learn \_\_\_\_\_ % of what they explain to someone else?**

# Towards effective & efficient learning....

The 2 key factors that underpin effective learning are

- **the learner activity**
- **interaction with others**

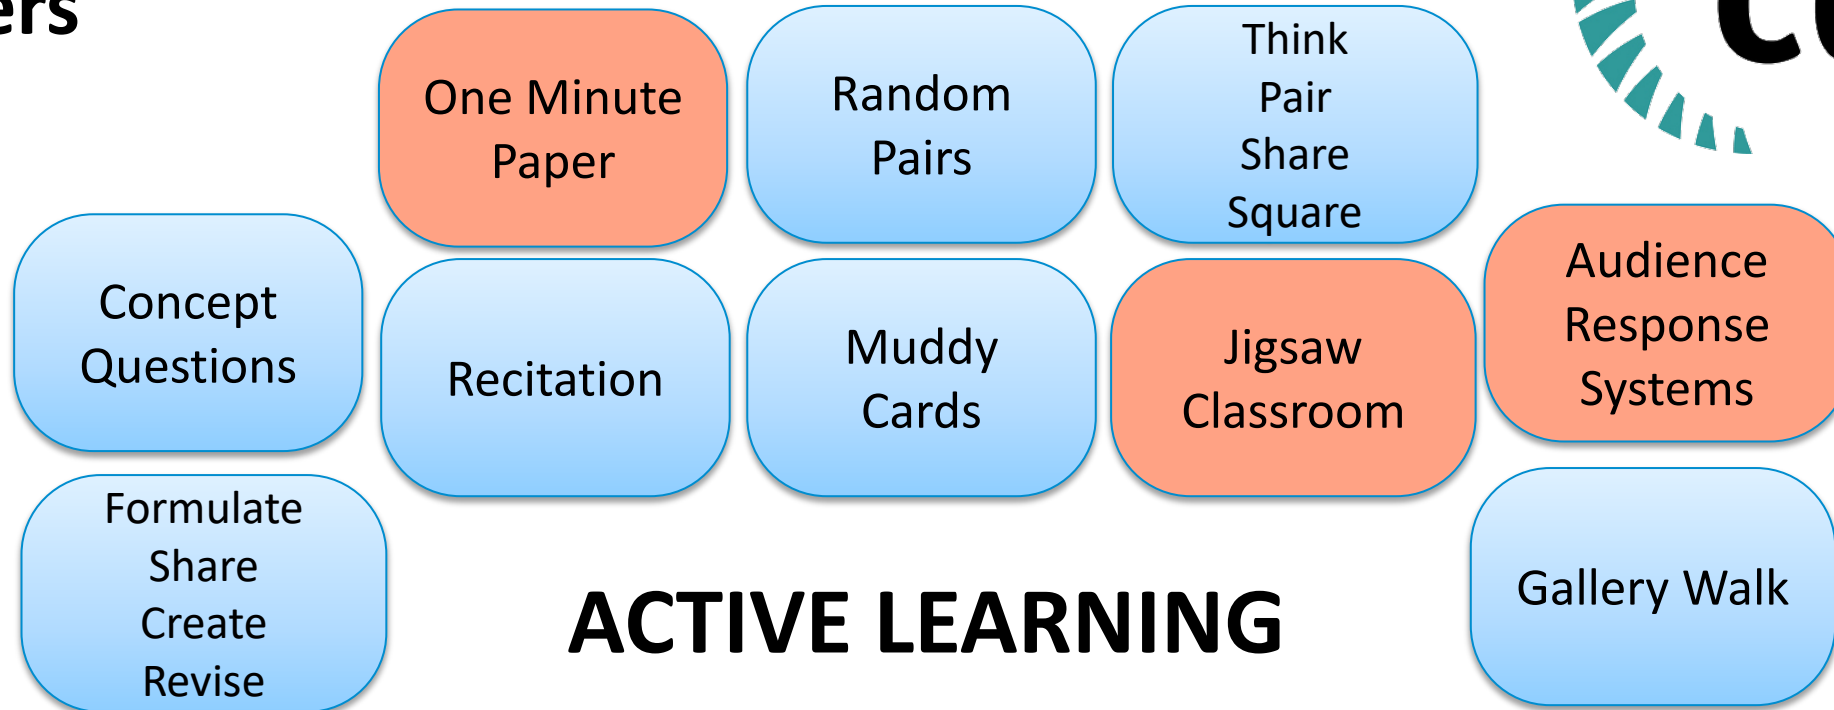

Gibbs, G. (1992) Improving the Quality of Student Learning. Bristol, UK: Technical and Educational Services

Several studies have shown that there is strong correlation between

- **extent of activity** and
- **efficiency of learning**

Biggs, J. (1999) Teaching for Quality Learning at University (pp. 165-203). Buckingham, UK: SRHE and Open University Press.

# Some Methods That Engage And Activate Learners

## ACTIVE LEARNING

---

## EXPERIENTIAL LEARNING

# Learning Activity- Jigsaw Classroom: CDIO Standards

## Why?

Deeper understanding  
of the standards

## What?

Learn four standards  
Preliminary self-  
evaluation

## How?

Active learning with the  
Jigsaw method

## You need

Standards v. 3.0 from  
[www.cdio.org](http://www.cdio.org)

Knowledge Library

CDIO Standards 3.0

**Don't close the Socrative page –  
we'll continue the quiz later!**

# Today's Active Learning Activity

You are going to participate in the **Jigsaw Method**

You will learn 4 CDIO standards (**2, 5, 7,10**)  
+ Jigsaw method

You will be “expert” on one of the standards and teach that to the others

# How the *Jigsaw* method works (ideal case)

## 1. Planning in **home groups**

## 2. Studying in the **expert groups**

## 3. Teaching and learning in **home groups**

## 4. Evaluation

# Group Activity: Phase 1

- Let's make **Home Groups** of 4 persons using Zoom breakout rooms (**get to know the people in your group – you are a learning team now!**) – **please remember the number of your room for the 3<sup>rd</sup> phase!**
- For each group → learning resources: 4 standard definitions **(2, 5, 7, 10)**
- Within the group **each person selects just one** standard and studies that independently
  - Every member of the group has a different standards to study
  - **This phase is for individual studying**

***10 minutes***

# Group Activity: Phase 2

- People with same standard join together and form **Expert Groups**
- **New breakout rooms are created and you should join to right room as the next slides shows**

## To Do:

- Discuss what you have learned and identify/agree the main points
- Consider how you would explain/teach the standard to others (***you will be doing this in Phase 3 to your home group***)
- Take some notes to help you later when teaching your ***Home Group***

***15 minutes***

# Group Activity: Phase 3

- Return to main meeting room and join to your original **Home Group (number X)** (breakout room)
- **Share your new knowledge**
  - Teach each other the standard you have learned
  - Use your notes and experiences of your expert group to support your teaching
  - 4 standards to learn as a group!
- ***20 minutes – 5 minutes/standard***

# JIGSAW Classroom

You've all learnt stuff but we haven't taught you anything

## **A cooperative learning approach in which:**

- Instructor facilitates student learning
- The students form 'learning teams' in which they teach themselves and each other

## **A 'learning contract' is formed between team members**

- Students are motivated to take responsibility for their own, and each others, learning
- Enhances student engagement with material
- Facilitates interaction between students
- Develops communication and teamwork skills

## **An efficient way to cover content**

# Assessing the Learning in Jigsaw

## ***Because***

- the role of the instructor is not to lecture but is to facilitate student learning and
- students teach themselves and each other

## ***Then***

- the instructor must check that appropriate student learning has occurred (with respect to intended learning outcomes)

***How might instructors check for understanding?***

... and one of those teaching and learning activities is:

*The tool for activating you*

# Back to your browser...

Use your mobile or other device and go to:

<http://www.socrative.com/>

- Click on "Student Login"
- Write Room name: TELI2020
- Input your "name" and join the competition..

STUDENT LOGIN

TEACHER LOGIN

A screenshot of the "Student Login" form. It has a light blue background. At the top, it says "Student Login". Below that is a label "Room Name" followed by a white input field. At the bottom is a large orange button with the word "JOIN" in white capital letters.

English

# **New question:**

**How many CDIO Standards there are in total?**

# **New question:**

**Which CDIO Standard helps us to design programmes that deliver appropriate graduate knowledge, skills and attitudes?**

# **New question:**

**The effectiveness of an undergraduate engineering education depends most on which CDIO Standard?**

# **New question:**

**Which CDIO Standard helps us make more effective use of student learning time to deliver the expected programme outcomes?**

**New question:**

**Which CDIO Standard helps us replicate engineering practice to help our students develop vital professional skills?**

# **New question:**

**Identify the inappropriate use of the CDIO  
Standard rubrics?**

# Assessing the Learning in Jigsaw

Let's see the results of the quiz & competition!

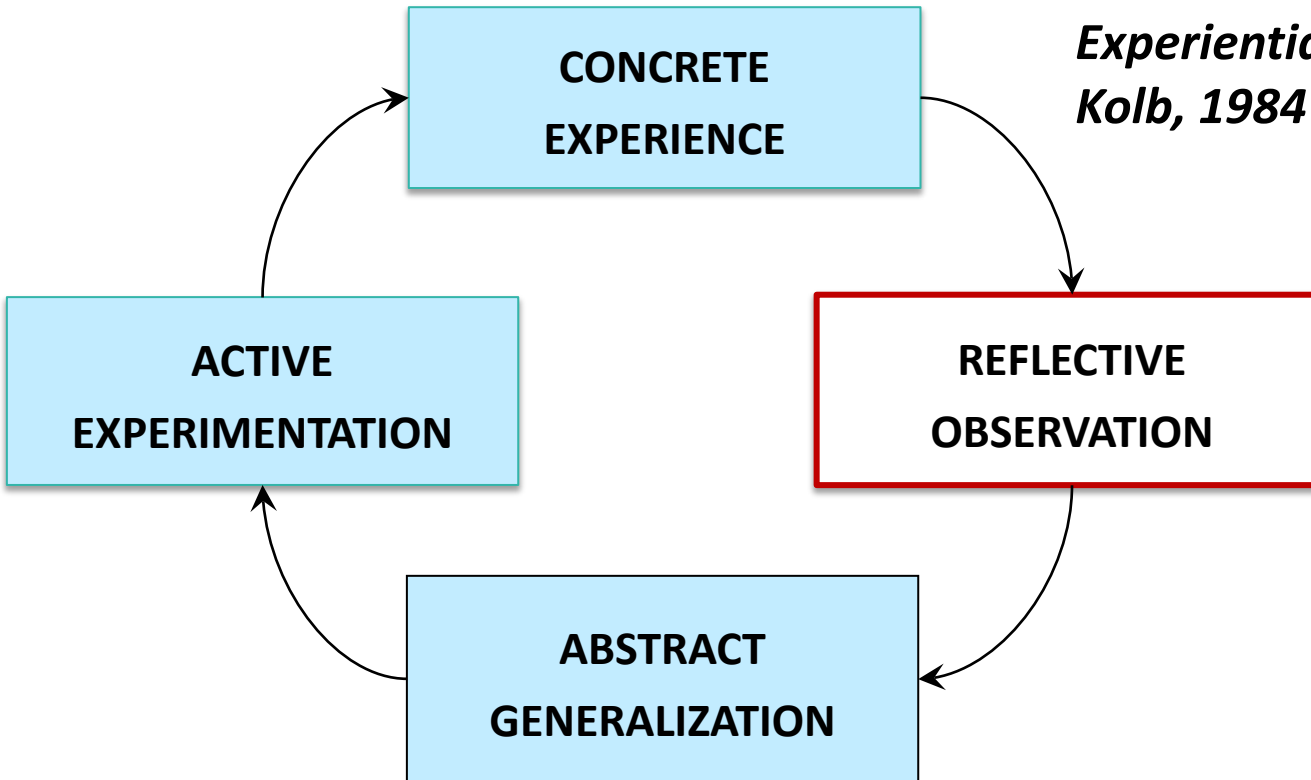

And remember:

- What's behind a high score!
- Learning pyramid – students retain 90% of what they teach to someone else

# Reflecting on our learning experience ....

*Experiential Learning Cycle  
Kolb, 1984*

**Learner reflection is important because it:**

- encourages learners to take charge of their own learning
- builds stronger connections between learning outcomes
- generates useful feedback for better course design
- sparks peer discussion & social interaction

***Why 'Reflection' Encourages a Better Learning Experience***

Click to read

# Example technique for student reflection:

## The 1-Minute Paper

This quick technique helps the teacher find out what students have or haven't learnt from a particular learning activity

It is used to confirm that key syllabus topics have been mastered, and that learning outcomes have been met

In its basic format, the teacher takes <5 minutes at end of class to ask students to answer on paper or Post-Its:

- What was the most important point made in class today?
- What unanswered question do you still have?

This gives immediate feedback that enables the teacher to adjust the next session to address difficulties, misunderstandings and gaps in knowledge

# Example technique for student reflection:

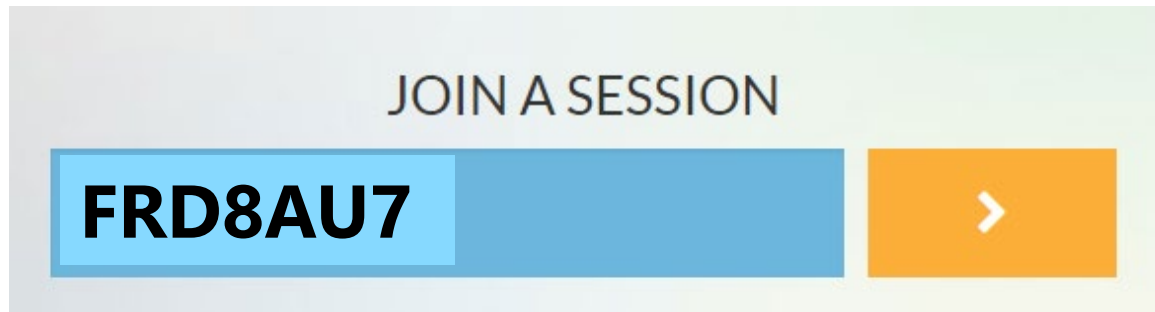

## The 1-Minute Paper

On a **GREEN** post-it note write down the most valuable thing you gained from today's session

On a **RED** post-it note write down those things that we didn't explain well, or ideas on how we could improve our session

Open new website to write post-it notes online: [flinga.fi](https://flinga.fi)  
(Don't add **www** to the link!)

Select right color and give your answer:

**Thank you!**
