

# AquaRisk Workshop 2026

## Risk-Resilient Aquaculture

*Balancing profitability and sustainability in an uncertain world*

A focused two-day workshop on how risk and environmental externalities in salmon aquaculture can be integrated into decision and policy frameworks

### Workshop themes

- Risk & profitability: prices, costs, contracting/hedging, forecasting
- Biological & operational risk: disease/lice, mortality, growth, harvest timing
- Environmental impacts & measurement: farm-level and value-chain indicators
- Decision frameworks under uncertainty: investment and operational strategies
- Policy & incentives: internalizing externalities, sustainable technology adoption

### Who should apply

Researchers, PhD students in aquaculture economics/finance/risk/operations/sustainability (and related methods), and industry representatives.

### Registration

Participation is free, including the dinner and social activity, but registration is required. Limited places available.

10–11 June 2026
