

Safety Policy:

All users must attend general laboratory safety and chemical management training prior to work in the EMLab. A user must request permission to bring a chemical into or out of the lab.

Users are expected to follow policies and procedures defined in the chemical management for the lab, and safety protocols established during the training. Any user not adhering to policy, procedures, protocols or safety requirements will be suspended from the lab.

Samples that have been embedded in EMLab will be stored in the lab. The user cannot remove the samples from the lab without clarifying with the EM staff in advance.
