GUIDELINES FOR GRADING:
GEOG3940 - MASTER’S THESIS IN MSc IN NATURAL RESOURCES
MANAGEMENT, SPECIALIZING IN GEOGRAPHY
Department of Geography, NTNU
(19.05.2016)

I. Formal criteria
Admission to the MSc in Natural Resources Management specializing in geography require a bachelor degree which should include at least 80 credits within geography and/or natural resources management. The Master’s thesis work will be integrated in ongoing research projects and to national/international issues suited for the individual student according to their specializations of study. The content of the thesis should attain an academic level appropriate to a master’s level course and should relate to the interdisciplinary framework of the courses taught for the master’s programme.

The Master in Natural Resources Management is an interdisciplinary cooperative programme involving four faculties at NTNU. The programme is administrated by the Faculty of Natural Sciences (NT). The program offers 4 specializations: Biology, Chemistry, Resource Geology and Geography

Content: A master’s thesis counts for 60 study credits and should be 35,000–44,000 words in length (c.100–125 pages), excluding the summary, preface, the contents, figures, and tables lists, references/literature lists, and appendixes. The title page should be followed by a summary in English, maximum 1 page/c.350 words.

Style and references formatting: The main text (body text) should be typed in 12 pt Times New Roman font with 1.5 line spacing. Arial font is recommended for section headings. Further, it is recommended that candidates use the same style and references formatting as in Norsk Geografisk Tidsskrift–Norwegian Journal of Geography. If other reference formats are used, for example APA or Hardvard, it’s important that the candidate is consistent.

Assessment: After the thesis has been submitted the candidate will be allotted date and time for oral examination lasting up to 1 hour based on the thesis. At the beginning of the oral examination the candidate must hold a 10-15-minute presentation of the thesis. It will not be
possible to use PowerPoint or similar presentation tools. An overall grade will be awarded on the basis of the thesis and oral examination, and will be announced following the completion of the oral examination.

**Examiners:** The Department of Geography will appoint two examiners for the assessment of the thesis, one of whom will be an external examiner, cf. Section 3-9 (2) of the Act Relating to Universities and University Colleges of 1 April 2005. External examiners will not have any employment connections with NTNU. The candidate’s supervisor(s) will not be examiners. In cases of disagreement regarding grading, the external examiner will make the final decision on the grade to be awarded (cf. Regulations for Studies at NTNU, supplementary regulations for SVT, Section 37 (2)).

**Supervisor’s role and censorship:** If necessary, the examiners may contact the candidate’s supervisor(s) to obtain a brief account of the candidate’s work.

**Appeals:** A candidate has the right to appeal against the grade they have been awarded. The appeal should be submitted to the SVT Faculty using the appropriate appeal form on NTNU’s ‘Explanation of grades and appeals’ website. The deadline for an appeal is three weeks from the date when the grade is announced. In cases where the grade is based on both the written part and the oral exam, and the assessment of the written part (i.e. master’s thesis) is subsequently changed, a new oral exam will be held to determine the grade (cf. Section 3-9 (5) of the Act Relating to Universities and University Colleges of 1 April 2005). If the appeals committee reaches the same conclusion as the original examiners regarding the master’s thesis (based on evaluation of both the thesis and the oral exam), the Department will not be under any obligation to arrange a new oral exam on the basis of the appeal.

A candidate may appeal against procedural errors. Such an appeal should be within three weeks of the candidate finding out about a matter that gives them reason to appeal.

**Justification of grading:** The candidate may request an explanation of the rational for the oral part of the examination immediately after notification of the grade awarded. Note that appeals cannot be made regarding the assessment of the oral exam. Candidates have one week to request an explanation of the basis for the grading of their master’s thesis. The request should be submitted using NTNU’s form for requesting an explanation of the grade awarded.
Plagiarism/copying is considered cheating. In cases of suspected plagiarism or copying, a grade will not be awarded to the candidate and the case will be handled in accordance with the Department of Geography’s guidelines for dealing with cheating or attempted cheating.

II. Grading scale
The grading scale used in conjunction with the exam for evaluation of the thesis ranges from A (highest grade) to F (failed). Please note that the thesis is worth 60 credits and is based upon 2–3 months’ fieldwork.

A:
An exceptionally well-written thesis that is well organized, has well-defined research objectives, advanced and adequate theory and methodology, an especially well performed analysis, together with very well formulated conclusions or recommendations. The candidate demonstrates exceptional reflective and analytical ability, and an extraordinary high degree of competence in the discipline in question.

B:
A very well written thesis that is well organized, has well-defined research objectives, advanced and adequate theory and methodology, and well performed analysis together with well formulated conclusions or recommendations. The candidate demonstrates good reflective and analytical ability, and high degree of professional maturity and independence.

C:
A well written thesis which is good in most parts, is clear and concise, has adequate theory and methodology, a good analysis, together with well formulated conclusions or recommendations. The candidate demonstrates a certain reflective and/or analytical ability and a certain degree of professional maturity and independence. Minor deficiencies can be accepted.

Alternatively, a thesis with a more original research objective and/or higher theoretical and methodological aims, but where certain theoretical and/or methodological weaknesses can be found.

D:
The work indicates little independence and limited ability in formulating clear approaches. Treatment of problems and presentation of results are characterised by serious theoretical and methodological errors.

**E:**
The thesis is characterised by a lack of understanding of approaches to research, weak scientific treatment of problems and poor presentation.

**F:**
The work is marked by lack of approach and serious theoretical and methodological errors and omissions.

**III. Checklist**
Grading of master’s theses should be based on the following guidelines (not in any order of priority)

a) Candidate’s ability to penetrate into a research topic and define approaches to problems.
b) Candidate’s ability to develop a perspective and familiarise themselves with theoretical and empirical research within the field.
c) Candidate’s ability to deal independently with the thesis’ content.
d) Candidate’s ability to order and present their work, including an awareness of current standards for contributions to scientific publications, e.g. those concerning formatting references.
e) Candidate’s originality in contribution to new research problems and results.
f) Candidate’s methodology.
g) Graduates with no delays will be positively assessed.
