Sør-Trøndelag Public Health Profile: Paving the way for a healthier future

John Tore Vik and Daniel Weiss

What?
The project began with a report outlining the current health status of the population, and the social and political conditions in which health status excels or suffers, while also offering recommendations for improving public health policy.

Why?
The main goal is to establish a social and political foundation for promoting health and building stronger, healthier, more sustainable communities in Sør-Trøndelag.

How?
Create a knowledge base guiding public policy and increasing general awareness for promoting health, create a feedback loop for monitoring and surveying determinants of public health (DoPH), encourage collaborative work in the name of public health, and stimulate a social and political culture focused on addressing DoPH.
